

Shutdown & Turnaround

We specialize in the execution of planned plant shutdowns and turnarounds, delivering safe, efficient, and timely services across industrial sectors. With strong planning, skilled teams, and integrated solutions, we help clients minimize downtime, ensure asset integrity, and optimize performance during critical outages.

Shutdown Planning & Coordination

- Comprehensive planning, scheduling, and resource coordination to ensure smooth execution and minimal disruption to operations.

Multidisciplinary Maintenance Execution

- Execution of mechanical, electrical, instrumentation, and civil maintenance activities within tight timeframes and with precision.

Inspection & Integrity Services

- Advanced inspection techniques to assess equipment condition and ensure compliance with safety and operational standards.

Vessel and Tank Cleaning

- Safe and thorough internal cleaning of process vessels and storage tanks to prepare for inspection, maintenance, or product changeover.

Shutdown & Turnaround

Piping and Valve Overhauls

- Repair, replacement, and testing of process piping and valves to ensure leak-free, reliable system performance post-shutdown.

Scaffolding & Access Solutions

- Rapid deployment of safe scaffolding and access structures to support maintenance and inspection activities at height or in confined areas.

Specialized Manpower Supply

- Provision of trained and certified personnel with shutdown experience to meet peak labor demands across multiple disciplines.

HSE and Permit-to-Work Compliance

- Strict adherence to safety protocols, risk assessments, and permit-to-work systems to ensure safe shutdown execution.

Rotating Equipment Overhaul

- Disassembly, inspection, repair, and reassembly of pumps, compressors, turbines, and other rotating machinery.

Blinding, De-blinding & Flange Management

- Controlled isolation and re-commissioning of process systems through professional blinding and de-blinding services, ensuring safe intervention.
