

Rotating Equipment

We provide comprehensive maintenance and troubleshooting services for pumps, compressors, turbines, and hydraulic systems — both in the workshop and in the field. Our solutions combine technical expertise with advanced diagnostics to enhance reliability, reduce downtime, and extend equipment life.

Pump Maintenance & Seal Repair

- Overhaul, inspection, and repair of all pump types, including replacement and refurbishment of mechanical seals to prevent leaks and ensure efficient performance.

Laser Alignment & Vibration Analysis

- Precision alignment and dynamic condition monitoring to detect imbalance, misalignment, or wear—preventing failures before they occur.

Hydraulic System Troubleshooting

- Diagnosis and repair of hydraulic systems, including pressure testing, leakage correction, and component replacement to restore full functionality.

On-site Machining & Nitrogen Fitting

- Field machining and nitrogen shrink-fitting services for rotating equipment components, minimizing downtime and eliminating the need for removal.

Predictive & Preventive Strategies

- Implementation of maintenance programs based on equipment condition data to prevent unplanned outages and optimize performance over time.
