

Field Services

We deliver comprehensive field services for industrial facilities, covering pipeline systems, pressure vessels, heat treatment, and electrical & instrumentation systems. Our teams also provide scaffolding and painting services, ensuring safe, efficient, and high-quality maintenance and project support in both onshore and offshore environments.

Process, Mechanical & Pipeline

- Pipeline and process system installation, maintenance, and integrity support, including flushing, testing, leak detection, nitrogen services, gauging, bolt torquing, and flange management.

Heat Treatment Services

- On-site heat treatment solutions such as pre-heating, post-weld heat treatment (PWHT), and stress relieving to enhance material integrity and prevent failures.

Scaffolding and Painting Services

- Provision of safe access systems and industrial coatings for protection, maintenance, and surface restoration in challenging environments.

Pressure Vessel Services

- Inspection, repair, and maintenance of pressure vessels to ensure compliance with safety standards and operational reliability.

Electrical, Instrumentation & Automation Systems

- Installation, calibration, and maintenance of electrical and control systems, supporting efficient plant automation and operational continuity.

Welding & Fabrication (Turnkey)

- End-to-end welding and fabrication solutions for piping, structural steel, and custom industrial components—covering design, workshop fabrication, on-site assembly, and quality control to deliver ready-to-use installations.
